

21st SUPPLEMENTAL REQUEST FOR DISCOVERY – EXHIBIT T

422. High quality photographs or scans of the latent prints of Jack Ducoeur collected in the case. Scans should be made at a minimum resolution of 1000 ppi and saved in a non-proprietary, non-destructive format such as TIF (no compression). Images should be individually scanned and NOT submitted in Multi-page formats. The photographs or scans must include both sides of any lift cards. Scans of the backside of the lift card that only include text or diagrams may be done at lower resolutions and saved in any non-proprietary format such as JPEG or PDF.

If the fingerprints were only photographed or scanned, as is the case for fingerprints developed with dye stains or chemical processes, then copies of the original digital image files should be submitted. Any enhanced images used for comparison should also be included. A scale should be included in each photograph or scan.

423. Results of all testing and comparisons conducted in this case with the latent prints of Jack Ducoeur.
